

A new way to validate and track the accuracy of liquid handling processes

We are pleased to invite you at our workshop at SLAS Europe 2018
Wednesday, June 27th, 2018, 10:30 – 11:30 a.m. Room: Studio 314

Discngine Qualification is a web application dedicated to the tracking and validation of liquid handling processes.

It provides new ways to evaluate their performance such as the combination of gravimetry/colorimetry data and the follow up of qualifications over time.

To enlighten those features, we plan a Qualification demo based on two use cases:

- Colorimetry data coming from an acoustic liquid handling system.
- Combination of gravimetry and colorimetry data coming from an integrated scale and an absorbance reader.

Timetable

10 :30 | Introduction to Discngine Qualification concepts

10:45 | Discngine Qualification live demo

11:15 | Questions and discussions

You will see

- How to validate your pipetting operations from colorimetry and gravimetry data.
- How to easily identify robotic processes drifts.
- How to track the performance of your liquid handling systems.
